Instructions   </> Code Examples   💬 Forum

Stage #LV1   (Pending)

| Input	Expected output
"hello world!"	hello world!
10.40	10.4
10	10

The tester will assert that the stdout of your program matches the format above.

Notes

- This output format matches the spec in the **book's repository**

- For the string literals, the tester will check that the program prints the string without quotes.

- For the number literals, the tester will check that the program prints the number with the minimum number of decimal places without losing precision. (For example, 10.40 should be printed as 10.4).
