algebraic operators, combined with previously introduced tokens.

For example, if `test.lox` contains the following:

```
52 + 80 - 94
```

The tester will run your program like this:

```
$ ./your_program.sh parse test.lox
(- (+ 52.0 80.0) 94.0)
```

The tester will assert that the stdout of your program matches the format above.

Notes

- This output format matches the spec in the **book's repository**
