Instructions   Code Examples   Forum

Pending

Input:

```
print "79" + "baz";
print false * (18 + 84);
```

Expected Output:

```
79baz
Operands must be numbers.
[line 2]
```

The tester will assert that the stdout of your program matches the format above, and that the exit code is 0.

Notes

- This output format matches the spec in the **book's repository**
