In this stage, you'll add support for the `INCR` command.

The INCR command

The **INCR** command is used to increment the value of a key by 1.

Example usage:

```
$ redis-cli SET foo 5
"OK"
$ redis-cli INCR foo
(integer) 6
$ redis-cli INCR foo
(integer) 7
```

If the key doesn't exist, the value will be set to 1.

We'll split the implementation of this command into three stages:

- Key exists and has a numerical value (**This stage**)

- Key doesn't exist (later stages)

- Key exists but doesn't have a numerical value (later stages)
