Instructions   </> Code Examples   Forum
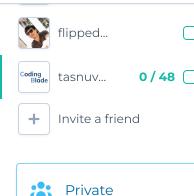

Stage #XC5   Pending

For example, if `test.lox` contains the following:

```
({*.,+*})
```

The tester will run your program like this:

```
$ ./your_program.sh tokenize test.lox
LEFT_PAREN ( null
LEFT_BRACE { null
STAR * null
DOT . null
COMMA , null
PLUS + null
STAR * null
RIGHT_BRACE } null
RIGHT_PAREN ) null
EOF  null
```

The tester will assert that the stdout of your program matches the format above.
