In this stage, you'll add support for the `EXEC` command when the `MULTI` command has not been called.

The EXEC command

The **EXEC** command executes all commands queued in a transaction.

It returns an array of the responses of the queued commands.

Example usage:

```
$ redis-cli
> MULTI
OK
> SET foo 41
QUEUED
> INCR foo
QUEUED
> EXEC
1) OK
2) (integer) 42
```

EXEC without MULTI

If `EXEC` is executed without having called `MULTI` , it returns an error.
