Empty transaction #WE1 (Pending)

Complete previous stages to gain access to this stage.

📄 **Instructions**   </> Code Examples   🎓 Concepts   💬 Forum

---

Your Task (Pending) **Share Feedback**   HARD

In this stage, you'll add support for executing an empty transaction.

Empty trasactions

If **EXEC** is executed soon after **MULTI**, it returns an empty array.

The empty array signifies that no commands were queued, and that the transaction was executed successfully.

Example usage:

```
$ redis-cli
> MULTI
OK
> EXEC
(empty array)
```

Tests

The tester will execute your program like this:

```
$ ./spawn_redis_server.sh
```

The tester will then connect to your server as a Redis client and run the follo
commands:
