Your Task   Pending   Share Feedback   HARD

In this stage, you'll implement the `DescribeTopicPartitions` response for a single topic.

Kafka stores metadata about topics in the `__cluster_metadata` topic. To check if a topic exists or not, you'll need to read the `__cluster_metadata` topic's log file, located at `/tmp/kraft-combined-logs/__cluster_metadata-0/00000000000000000000.log`.

We've created an interactive protocol inspector for the cluster metadata log file and the `DescribeTopicPartitions` response:

- 🔍 **Cluster Metadata Log File**

- 🔍 **DescribeTopicPartitions Response (v0)**

🚧 **We're still working on instructions for this stage**. You can find notes on
