This is the RESP encoded representation of the following.

```
[
  [
    "stream_key",
    [
      "0-2",
      [
        "temperature",
        "95"
      ]
    ]
  ]
]
```

It'll send another `XREAD` command to your server with the `BLOCK` command but this time, it'll wait for 2000 milliseconds before checking the response of your server.

```
$ redis-cli XREAD block 1000 streams stream_key $
```

Your server should respond with `$-1\r\n` which is a `null` representation of a RESP bulk string.

Notes

- In the response, the items are separated onto new lines for readability. The tester expects all of these to be in one line.
